

ABSTRACT

The aspect of this invention is to provide a freshness maintaining apparatus designed to keep various items fresh for a lengthy period of time. The apparatus includes a water storage unit (10). A support unit (11) is installed in the water storage unit (10), and cooling water is contained in the water storage unit under the support unit. A filtering unit (30) is connected to the water storage unit (10) via a drain line (20) to remove impurities from water flowing to the filtering unit. A cooling unit (40) is connected to an end of a water supply branching pipe (32) of the filtering unit (30) to cool the filtered water fed from the filtering unit to a predetermined temperature. A humidifying unit (50) is connected to another end of the water supply branching pipe (32) to atomize the filtered water fed from the filtering unit (30).
